

# MATH UNIT TESTS

How to Study 101

## SUGGESTED STUDY SKILLS:

1. In your spiral, start at the beginning of a unit, and write a **list of all the titles (topics)** from each page.
2. For **each** topic you list:
  - a. Read the **warm up** and re-do the problem to be sure you understand the answer(s).
  - b. Read over your **notes** for that day. Highlight any text that seems to be important to help you calculate answers to problems.
  - c. Re-do any **example problems** and be sure you get the correct answers.
  - d. Review all **problems in the workbook** that were assigned for homework.
  - e. Review all **problems on worksheets** completed in class (or for homework if applicable).
3. After you have finished reading over ALL your notes for the unit and reviewed the problems you have already completed, look over that list you made in step #1.
4. Answer the following questions:
  - a. Do you understand all the topics on your list?
  - b. Are there any topics that you found more difficult?
5. For any topics that you need more practice, **complete additional problems** either in the workbook or on worksheets that were not 100% finished.
6. Get a good night's sleep and eat a healthy breakfast! 😊
